 - 3.7. [Create Appointment](#)
 - 3.8. [Download Document](#)
 - 3.9. [Get Appointments Details](#)
 - 3.10. [Save Document](#)

1. Overview

The API provides access to create jobs. The API includes the following features:

- Based on **web protocols** (HTTP(S), JSON etc) and the **REST** architectural style. It requires no client-side installation or SDK in order to begin developing
- Every endpoint requires a Partner-Key in the header body.
- Response body is always in JSON format.

2. Accessing the API

2.1. Client-Side Requirement

A REST client such as the following is recommended for development and testing:

- Postman, popular desktop application available on Windows, macOS and Linux
- Advanced REST Client, a Chrome extension on the Chrome Web Store
- Fiddler, a desktop environment from Telerik

2.2. Service Endpoints

Live base URL: <https://web.nybestmedical.com/api/v1/>

2.3. Request Headers

The following headers are required for requests to the endpoint

Parameter Name	Value
authorization	(You can get the api key from contacting your account manager.)

3. Endpoints

Notes: **Authorization Token is Required**

3.1. Get Appointment List

Purpose: Get list of appointment

EndPoint: patient-list

Production URL: <https://web.nybestmedical.com/api/v1/patient-list>

Method: GET

Search Parameter (Request Body)

Parameter Name	Description	Requirement
first_name	First name of Patient	Optional
last_name	Last Name of Patient	Optional
offset	Offset of specifies the starting Record	Required

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.
data	array	List of Appointment.

3.2. Get Service List

Purpose: Get list of service

EndPoint: service-list

Production URL: <https://web.nybestmedical.com/api/v1/service-list>

Method: GET

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.
data	array	List of Service List.

3.3. Get Document List

Purpose: Get list of Document

EndPoint: document-list

Production URL: <https://web.nybestmedical.com/api/v1/document-list>

Method: GET

Parameter (Request Body)

Parameter Name	Description	Requirement
id	id of Patient	Required

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.
data	array	List of Document List.

3.4. Get Language List

Purpose: Get list of language

EndPoint: [language-list](#)

Production URL: <https://web.nybestmedical.com/api/v1/language-list>

Method: GET

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.
data	array	List of Language List.

3.5. Get Discipline List

Purpose: Get list of Discipline List

EndPoint: discipline-list

Production URL: <https://web.nybestmedical.com/api/v1/discipline-list>

Method: GET

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.
data	array	List of Discipline List.

3.6. Get Payment Type List

Purpose: Get list of payment type list

EndPoint: payment-type-list

Production URL: <https://web.nybestmedical.com/api/v1/payment-type-list>

Method: GET

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.

data	array	List of Payment TypeList.
------	-------	---------------------------

3.7. Create Appointment

Purpose: Create new Appointment

EndPoint: add-appointment

Production URL: <https://web.nybestmedical.com/api/v1/add-appointment>

Method: POST

Parameter (Request Body)

Parameter Name	Description	Requirement
first_name	First Name of Patient	Required
middle_name	Middle Name of Patient	Not Required
last_name	Last name of driver	Required
type	Type of Patient(Caregiver/Patient)	Required
dob	Date of Birth	Not Required
fu_date	Fu Date for Patient	Not Required
due_date	Due Date for Patient	Not Required
phone	Phone for Patient	Not Required
mobile	Mobile For Patient	Required
gender	Gender For Patient	Not Required
message	Any remark	Not Required
service_id	Services for Patient	Required

patient_code	Patient Code for Patient	Not Required
diciplin	Discipline for Patient	Not Required
language	language	Not Required
address1	Address 1 Fr Patient	Not Required
address2	Apt/Suite/Floor For Patient	Not Required
state	State For Patient	Not Required
city	City For Patient	Not Required
zipcode	Zip Code for Patient	Not Required
country	Country for Patient	Not Required
payment_type	Payment Type For Patient	Not Required
priority	Priority	Not Required
platform_type	User your portal name	Required
platform_id		Required
partner_agency		Not Required
cin		Not Required
ssn		Not Required
emergency_contact_name		Not Required
emergency_contact_number		Not Required

Sample Payload

The following can be used in programs like Postman

```

{
  "first_name": "Vishal",
  "middle_name": "",
  "last_name": "Patael",
  "type": "Caregiver",
  "dob": "01\22\1988",
  "fu_date": "12\20\2024",
  "due_date": "12\20\2024",
  "platform_id": "",
  "phone": "",
  "mobile": "7778020978",
  "gender": "male",
  "message": "",
  "service_id": "187",
  "patient_code": "",
  "diciplin": "PA",
  "language": "",
  "address1": "NY",
  "address2": "",
  "state": "NY",
  "city": "New York",
  "zipcode": "11368",
  "country": "Queens",
  "payment_type": "",
  "platform_type": "VA",
  "partner_agency": "",
  "priority": "0",
  "cin": "123456789",
  "ssn": "123555566",
  "emergency_contact_name": "VIshal",
  "emergency_contact_number": "00000000000"
}

```

Response Parameter (JSON format)

Name	Type
status	integer
Success	string
appointment_id	integer Appointment id.

3.8. Get Download Document

Purpose: Get Download Document

EndPoint: download-document

Production URL: <https://web.nybestmedical.com/api/v1/download-document>

Method: GET

Parameter (Request Body)

Parameter Name	Description	Requirement
id	ID of Patient	Required
documentId	Document id of Patient Document	Required

3.9. Get Appointment Details

Purpose: Get Appointment Details

EndPoint: patient-detail

Production URL: <https://web.nybestmedical.com/api/v1/patient-detail>

Method: GET

Parameter (Request Body)

Parameter Name	Description	Requirement
id	ID of Patient	Required

Response Parameter (JSON format)

Name	Type	Description
status	integer	This API success status will return 0 if it succeeds, and other numbers if it fails. (See Service Status Codes)
Success	string	The English description of the API access status value. If successful, it returns "ok" and the result field. If it fails, it returns an error description.
data	array	List of Appointment.
